BYTERUNNERS
GAME STUDIO

Hello! Seems like You have obtained our asset! We are happy that we gained Your trust and we hope You will like it.

If You like our samples, check out more of our assets on Asset Store. There are more sounds available, and still a lot more coming.

What else can we do for You?

We design and create content assets for both **Unity** and **Unreal Engine**, including static meshes, skeletal meshes and complex assets like NPC's, scripted controllers and more.

We create complete packages of content including sound assets, music, meshes, textures and materials for **Your game or application.**

Games and simulations

We may develop or help co-develop complete game or simulation/presentation projects. If You are a game designer or indie developer and You need additional workforce to create Your project, contact us and use outsourcing!

We make assets for Unity and Unreal engines, but we also may create elements for other desired platforms according to Your specification. Feel free to ask us If we can help You!

Sound effects, music and dubbing

Looking for good quality sound assets for Your game? Need dubbing for Your NPC's, characters or trailers?

You want Your game music and ambient to create the perfect mood for maximum player experience? There is nothing to wait for!

We create professional hi-quality sound and music assets just for Your needs. We always fit solutions to our clients budgets. The final price will surely suprise You!

Brand Designing

**Even a very good game won't get far without good branding
design!**

After You have created Your game, You will probably need to
promote it in some media. Every game project is a product, and
product requires branding. **You will need logos, banners, a
professional website, good looking game UI, ads and trailers.**

If You do not feel good at this matter, let us do it for You, or help
You do it. You will not be disappointed!
We have many years of experience in marketing, design and web
development – do it PRO-way!
